Filtering

Column Reordering with Drag-and-Drop

You can reorder columns using drag-and-drop. Use the following example to enable column reordering.

Column Binding

Explicitly-created columns.

```
<sq:Grid ID="Grid1" runat="server">
  ...
  ...
  SortExpression="ProductID" UniqueName="ProductID">
  UniqueName="ProductName">
  SortExpression="UnitPrice" UniqueName="UnitPrice">
  ...
  >
```

Resizing Columns

```
<sq:Grid runat="server" ID="Grid1" GridLines="None" CellSpacing="0"DataSourceID="DataSource1">
  AllowColumnResize="True" AllowRowResize="false"ResizeGridOnColumnResize="false"
  ClipCellContentOnResize="true" EnableRealTimeResize="false" AllowResizeToFit="true"/>
  ...
  </sq:Grid>
```

Exporting

This is a configuration example.

Basic Paging

```
PageSize="5" AllowPaging="True" AllowCustomPaging="True">
```

Calculated Column

You can sort, group, and filter columns the same way you would *GridBoundColumn*. You specify the columns used in the calculation in the *DataFields* property. The actual calculation is defined in the expression property.

```
..
```

```
..
```

This is an example of Aggregate and CalculatedColumn functions in a grid.

```
<%@ Control %>
```
