

# Textbox Control Code Samples

Last Modified on 03/06/2018 2:11 am EST

## AutoComplete

This sample demonstrates how to use the *AutoCompleteType* property to specify the AutoComplete category for a Textbox control. The text box accepts user input, which is a potential security threat. By default, [ASP.NET](#) Web pages validate that user input does not include script or HTML elements.

### [ASP.NET] AutoCompleteType

```
<form id="form1" runat="server">
<h3>
  AutoCompleteType example
  Enter values in the text boxes and click the Submit button. />
<br />

<sq:TextBox ID="FirstNameTextBox" AutoCompleteType="FirstName" runat="server"
  Label="First Name:" /> />
<sq:TextBox ID="LastNameTextBox" AutoCompleteType="LastName" runat="server"
  Label="Last Name:" /> />
<sq:TextBox ID="EmailTextBox" AutoCompleteType="Email" runat="server" Label="Email:" /> />

<sq:TextBox ID="Phone1TextBox" AutoCompleteType="HomePhone" runat="server"
  Label="Phone Line #1:" /> />
<sq:TextBox ID="Phone2TextBox" AutoCompleteType="HomePhone" runat="server"
  Label="Phone Line #2:" /> />

<sq:TextBox ID="CategoryTextBox" AutoCompleteType="None" runat="server" Label="Category:" /> />

<sq:TextBox ID="CommentsTextBox" AutoCompleteType="Disabled" runat="server"
  Label="Comments:" /> />
<br />
<br />
<sq:Button ID="SubmitButton" Text="Submit" runat="Server" />>
```
