

# Add a Validator to a Control

Last Modified on 03/06/2018 2:14 am EST

## Prerequisites

Make sure you create a workflow that includes a form.

## Procedure

1. In UX Studio, select **Options > Advanced**, and click **OK**.
2. From the Toolbox panel, click the validator you want to add.
3. Configure the validator using the options in the Properties panel.
  - a. In the **ControlToValidate** text box, enter the ID of the control that you want to validate.
  - b. In the **ErrorMessage** text box, type the error message that is displayed to users when field validation fails.
4. (Optional) Define additional properties, as necessary.
