

Add Attachments to a Message

Last Modified on 09/16/2019 6:23 am EDT

Overview

You can add attachments to a message using expressions or from an external data source. The expression value should be a GUID that represents the ID of a file in the tblAttachments table.

Message Attachment Options

Message Section	Action
Attachment Type and Value	<ul style="list-style-type: none">• Expression: an attachment based on the result of a process field expression. The expression's result should be a field of type attachment.• Custom: an object from an external data source.
Add attachment	Click to add an attachment directly.
Compress all attachments into one ZIP file	Compresses all attachments into a single ZIP file.

Add Multiple Attachments to a Message from a Grid

If you have a grid with attachment type fields and you want to include all the files from the grid in a message, you can use the following expression.

```
{Activity Name}.Query("Grid Name").Select(field("AttachmentFieldName"))
```
