

Configure One-Click Action for a Task

Last Modified on 02/16/2021 11:19 am EST

Overview

Note that the user interface has changed in later versions of Cora SeSequence, but the procedure demonstrated in this article and video remains the same.

Overview

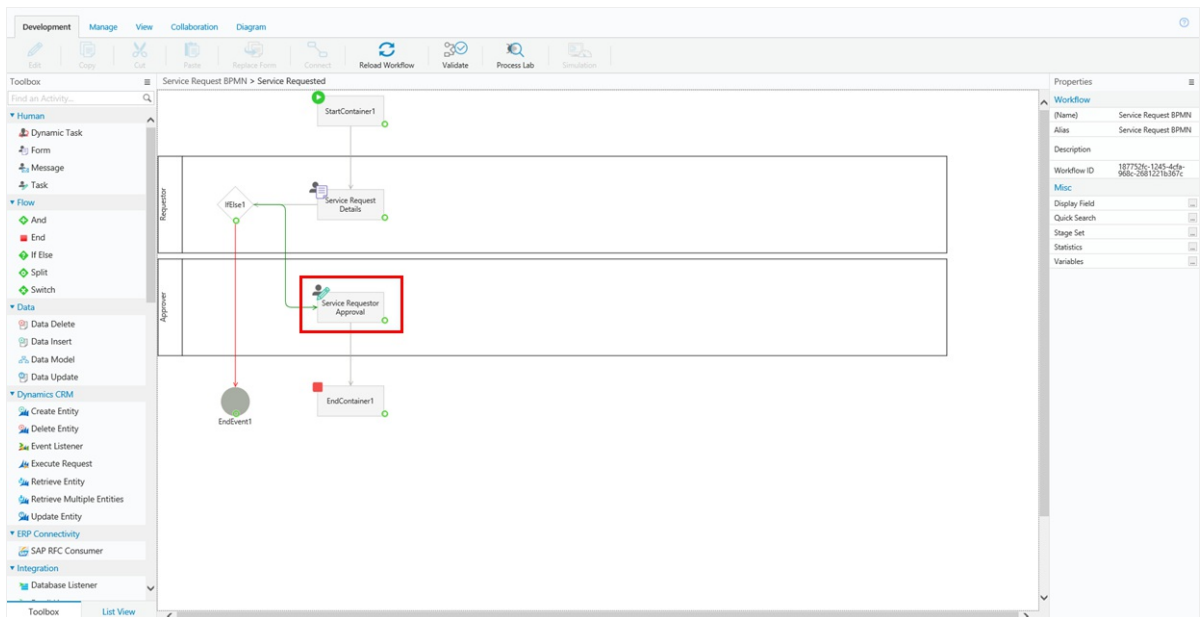

The One-Click Action feature for tasks enables end users to complete a task by clicking a link in the task's notification email. You can configure several actions that appear as links in the One-Click Action email.

For each action, you can set the task's form fields to specific values. When the end user clicks a link, the task's form fields automatically populate with these values, thereby completing the task.

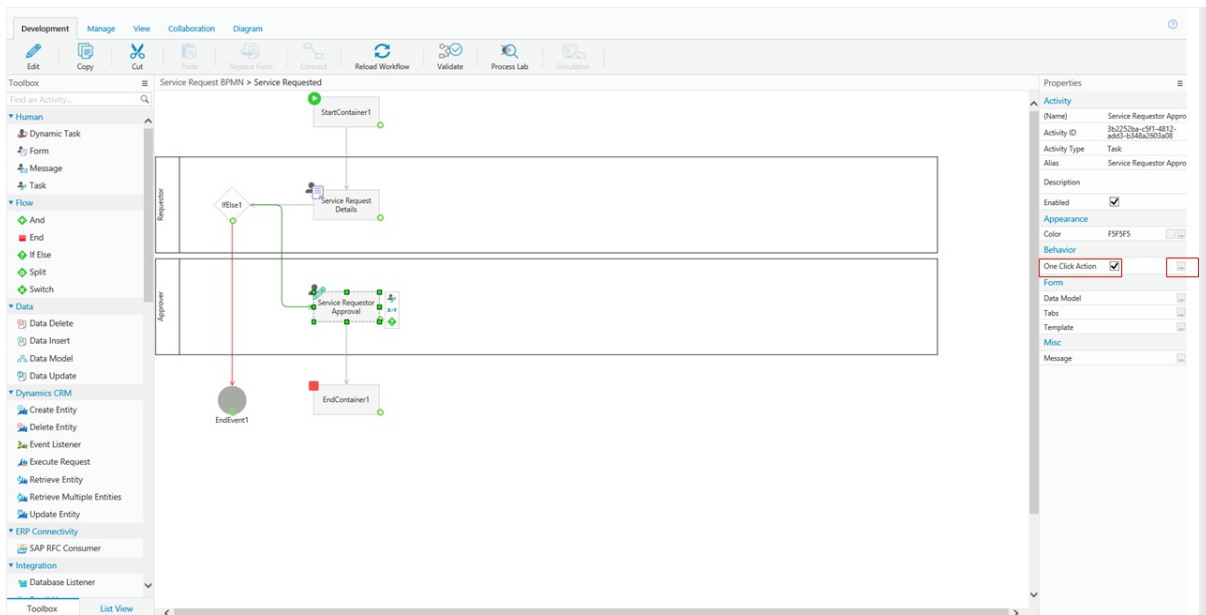

In this example we will enable one-click action for a task from a service request workflow.

Procedure

1. In App Studio, click the task on the visual canvas.

2. In the Properties panel, select the **One Click Action** check box, and click the ellipsis button.

3. Click add a new action.

One Click Action Definition Wizard

?

Caution: By enabling this feature, you may cause a security breach.

Link Expiration: Days from the time the mail was sent.

+ Add New Action

Finish

Cancel

4. Enter an Action Name, Action Alias, and Description, then click **Add Assignment**.

Action Definition Wizard ?

Action Name
 ←

Action Alias
 ←

Description
 ←

[+ Add Assignment](#)

OK **Cancel**

5. From the **To** drop-down menu, select **DefaultView.Approve**, and click **OK**.

Action Definition Wizard ?

Action Name

Action Alias

Description

To	Value
<input type="text" value="DefaultView.Approve"/>	<input type="text"/>
DefaultView.Email	
DefaultView.HighPriority	
DefaultView.Name	
DefaultView.RequestDate	
DefaultView.ServiceRequested	

[+ Add Assignment](#)

OK **Cancel**

Result

Users can now complete the task with one click directly from the task message.
