Switch Activity Overview
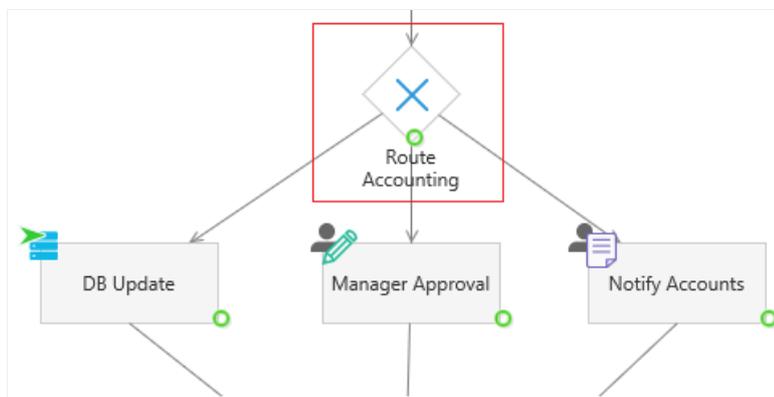

Context

Use the Switch Activity to direct a workflow to one of several target activities. The workflow direction is defined by the outcome of a set of conditions. The workflow moves to the first target activity when that activity's condition is met.

Use Cases

- Direct a financial loan request to the appropriate department depending on the loan request amount.
- Direct a help-desk ticket to the appropriate support department depending on the nature of the ticket.

Wizard Tips

- In the Output Conditions screen, the *Order* parameter defines the order that Sequence checks the conditions.

Switch Activity Output Conditions

Order	Target activity	Condition		
1	Assign1	{Message}.CreatedBy.DisplayName ="Account Manager"	...	✖
2	Expense Request	{Expense Request}.Query("ExpenseRequest")["CmbCity"]	...	✖
