Data Update Activity Overview

Last Modified on 12/03/2017 8:34 am EST

Context

Use the Data Update Activity to update data in a query, either to the Sequence database, or an external database.

Use Cases

- A workflow has an action that you want to update the value for in another flow.

Wizard Tips

- You can configure advanced parameters that help protect against accidental data changes. After you define the data update definition, click **Next**. If you click **Finish**, the wizard closes.
