

Create Folder Activity

Last Modified on 03/26/2017 2:26 am EDT

Context

The Create Folder Activity creates a folder in an external target system. After you create the folder, you can export information to the folder from by executing other activities, such as the Upload Activity, to export and store information from to an external target system.

Use Cases

Create a folder to store data for a specific:

- Time period (day, week, month)
- Client/Customer
- Workflow

Wizard Tips

- The **Root** is created when you define the FTP/SFTP connection.
- The **Path** is where you want to create the folder.
- The **Folder Name** should be meaningful, for instance, `Client A Purchases for April`.
- The **Path** and **Folder Name** combine to create the folder.
