# Dynamics CRM Activities Overview

Cora SeQuence includes several out-of-the-box activities that integrate with Microsoft Dynamics CRM. These activities enable you to create, retrieve, edit CRM entities, and execute CRM actions.

Each activity has a step-by-step wizard, in which you define the connection to a CRM instance, and then define how the process interacts with the CRM entities or action.

Cora SeQuence supports the following CRM integration activities.

- Create A CRM Entity
- Delete Entity
- Fetch Entity
- Execute Request
- Retrieve Entity
- Retrieve Multiple Entities
- Update Entity
