SharePoint Activities Overview

Last Modified on 09/01/2025 8:14 am EDT

Starting with V10.0, Cora SeQuence has been renamed to Cora Orchestration.

v10.x and later

Use SharePoint activities in dynamic workflows to execute common operations on SharePoint lists, such as check in or check out documents, create or update list items, and more, when your solution combines document management capabilities based on SharePoint. This out-of-the-box functionality simplifies creating business processes that interact with SharePoint environments.

- Check In Document Activity
- Check Out Document Activity
- Create List Item Activity
- Delete List Item Activity
- Execute Request Activity
- Update List Item Activity
- Upload Document Activity

NOTE
Starting from V10.6, SharePoint activities support OAuth authentication.

v8.x and later

Use SharePoint activities in dynamic workflows to execute common operations on SharePoint lists, such as check in or check out documents, create or update list items, and more, when your solution combines document management capabilities based on SharePoint. This out-of-the-box functionality simplifies creating business processes that interact with SharePoint environments.

- Check In Document Activity
- Check Out Document Activity
- Create List Item Activity
- Delete List Item Activity
- Execute Request Activity
- Update List Item Activity
- Upload Document Activity

NOTE
SharePoint activities don't support OAuth authentication.

v7.x

Use SharePoint activities in dynamic workflows to execute common operations on SharePoint lists, such as check in or check out documents, create or update list items, and more, when your solution combines document management capabilities based on SharePoint. This out-of-the-box functionality simplifies

creating business processes that interact with SharePoint environments.

- Check In Document Activity
- Check Out Document Activity
- Create List Item Activity
- Delete List Item Activity
- Update List Item Activity
