SharePoint Create List Item Activity Overview

Context

Use the Create a List Item Activity to create an item in a SharePoint list, or create a folder in SharePoint, as part of a dynamic workflow.

Wizard Tips

- For all parameters, make sure you clear the **IsNull** check box in the right pane.
- The ***Site URL*** parameter is optional. If you populate this parameter, you can dynamically determine the target site when you execute the activity. The credentials you entered must be valid for the calculated site.
- Define the following parameters in the left pane.
  - *ListReference*
  - *ListItemCreationInformation*
    - *FolderURL*: this parameter is optional and is used to create a sub-folder in a document library.
    - *UnderlyingObjectType*: expand the **enumvalues** from the right tree, and select the appropriate value.
    - *LeafName*
  - *ListItemFields*
    - *FieldValues*
    - *ListItemField*
    - *Length*
