Web Service Fault Activity Overview

Last Modified on 12/04/2017 3:49 am EST

Context

Use the Web Service Fault Activity to define an error message that displays if a Web Service activity fails. You can only use this activity as part of a workflow that also includes a Web Service Input or Web Service Listener Activity. You can execute this activity as part of an Error Handling and Compensation section of the workflow, and selected as the result of the compensation.

Wizard Tips

- **Input Activity**: You must select at least one Web Service Input Activity.
