# App Studio and Dual View Overview

Overview

App Studio is the visual environment where you design dynamic workflows. BPM is a process managed by disparate stakeholders, business users and process developers. PNMsoft's Dual View harmonizes their work on process modeling and process design, in a single interface.

Benefits

- Reduces development time
- Improves collaboration between teams, and within a team
- Advanced modeling capabilities
- Minimizes errors with advanced debugging functionality

Business View

High-level model of the process, using familiar BPMN activities.

Design View

Dive into the process containers and define the activities' functionality.
