Create Statistics for Workflow Components

Last Modified on 11/30/2017 7:15 am EST

Use the statistics feature to collect business-process related statistical information gathered from workflow components, both native and external, and metadata.

Common Use Cases for Statistics

- Business analysis in charts
- Information source for workflow forms, such as default values for fields
- Create business rules to determine process flow

Procedure

1. Access **App Studio** > **Properties panel** > **Misc section**.
2. Next to **Statistics**, click the three dot button.

3. Complete the Statistics wizard.

Wizard Notes

Wizard Parameter	Notes
History Interval	Time interval for which statistical data is collected.
Expression Editor	Define the statistical expression manually or use the Fields section and Functions section to add expression components.

4. Click **Validate** to validate your statistic.
5. Click **Finish**.
