

# Cora SeQuence Generated Emails Contain Untitled Attachments

Last Modified on 01/16/2018 7:29 am EST

## Description

When you receive email generated from Cora SeQuence, there are two, untitled DLL file attachments.

## Cause

BRS is configured to send logos in Cora SeQuence-generated emails, but the XSLT. does not include the logos.

## Solution

You can either disable logo sending, or add the logo images to the XSLT file.

### Disable Logo Sending

1. Open the BRS configuration file.
2. Locate the sendLogos parameter and change the value from true to false.  
`sendLogos="False"`
3. Save the BRS configuration file.
4. Restart BRS.

### Add Logos to the XSLT File

1. Navigate to the folder where you installed BRS.
2. Navigate to `\Messaging\Images`, and put your logo files in each relevant language folder.  
We recommend that you do not change the naming convention.
3. Navigate to `\Messaging\XSLT` and modify each relevant language XSLT file to include the logo images in the email body's HTML.  
`<img alt="Logo" data-bbox="145 575 155 585" style="display: block; margin: 0 auto; width: 10px; height: 10px; border: 1px solid black; background-color: #ccc; vertical-align: middle;"/>`
4. Save the XSLT file.
5. Restart BRS.
