Authenticate Users

Windows Authentication

When you use Windows authentication to authenticate users:

```
AuthenticatedUser user = engine.GetServiceWithCheck().Authenticate();
user.CurrentUserInfo.DisplayName;
```

Add the following section to the configuration file.

User Name and Password Authentication

When you use user name and password authentication to authenticate users:

```
AuthenticatedUser user = engine.GetServiceWithCheck().Authenticate("john","1");
user.CurrentUserInfo.DisplayName;
```

Add the following section to the configuration file.
