

Retrieve a Web Service URL

Last Modified on 04/24/2017 8:47 am EDT

Use the API to retrieve a Web service's URL, by referencing the service name from the Web service consumer table.

```
public static string GetWebServiceConsumerUrl(string serviceName)
{
    WebServiceConsumerDefinition definition =
        WebServiceConsumerDefinition.GetWebServiceConsumer(WorkflowRuntime.Engine, serviceName);

    return definition.DiscoveryUrl;
}
```
