

Assign Values to Workflow Parameters

Last Modified on 04/24/2017 8:59 am EDT

Use the API to assign values to workflow parameters when the workflow is executed.

```
using System;
using System.Collections.Generic;
using PNMsoft.Sequence;
using PNMsoft.Sequence.Runtime;

namespace SequenceEx.Samples
{
    public class StartingWorkflowSample
    {
        public WorkflowInstance StartWorkflowInstance()
        {
            Guid workflowId = Guid.Empty; //assign a valid workflow ID.
            Dictionary variables = new Dictionary();
            variables["var1"] = "var value";
            variables["var2"] = 1;

            IWorkflowExecutionService svc = WorkflowRuntime.Engine.GetService();
            return svc.StartWorkflow(workflowId, variables);
        }
    }
}
```
