

Define a Rollback Message

Last Modified on 09/07/2017 3:38 am EDT

By default, Cora SeQuence uses the template message from the resource file. To define a custom rollback message, clear the **Use the default message template** check box.

Message Details for Form1 ?

Message Recipients Properties Attachments More Options

Subject

{ wf.WorkflowName } #{ wf.WorkflowInstanceId } was rolled back. ...

Body

{ wf.WorkflowName } #{ wf.WorkflowInstanceId } was rolled back by { rt.CurrentUser.DisplayName } on { ToUserDate(rt, Now(), msg.To.UserId) }. As a result, one or more tasks you have received were rolled back as well. For your information, a log of all committed activities is kept in the system repository. ...
