

Edit a Grid Column

Last Modified on 05/17/2017 4:15 am EDT

You can add, remove, reorder, and change grid properties.

The screenshot shows the 'Grid Editor' window with a 'Columns' tab selected. A help icon (?) is in the top right. Below the tab is a text instruction: 'Double click a column from the "Available Columns" list to add it to your grid. Use the Properties Pane to configure your column.' The interface is divided into three main sections:

- Available Columns:** A list of column types including Attachment, Bound (highlighted), Button, Calculated, CheckBox, ClientDelete, ClientSelect, DateTime, DragDrop, DropDown, EditCommand, HTMLEditor, HyperLink, Image, Masked, Numeric, Rating, RowIndicator, and Template.
- Selected Columns:** A list of columns currently on the grid, including fldId (Numeric), fldWfld (Numeric), fldActId (Numeric), fldAllId (Numeric), fldMasterWfld (Numeric), Field1 (Bound), Field2 (Numeric), and Field3 (DateTime).
- Properties Pane:** A configuration area for the selected 'fldId (Numeric)' column, divided into:
 - Appearance:** Fields for FooterText, HeaderImageUrl, HeaderText (set to 'fldId'), ShowSpinButtons (checkbox), and DataFormatString.
 - Behavior:** Checkboxes for AllowFiltering, AllowOutOfRangeA, AllowSorting, Display, FooterAggregateFo, and Groupable.

At the bottom of the Properties Pane is a button labeled 'Convert this column to a Template column'. At the bottom of the entire window are 'Finish' and 'Cancel' buttons.

Note: Click this button to convert this column into a template column. You can fully customise the layout and behaviour of template columns in the UX Studio, by clicking Edit Templates in the grid's smartpane. For example, you can customise how users enter data for this column, or how this column is displayed (for example, with added gauges or icons).
