

Configure Order by Parameters for a Data Source

Last Modified on 11/30/2017 7:25 am EST

Order a data source's displayed values, such as a grid or combo box, according to one or more parameters.

Order By Parameters Wizard -- Webpage Dialog

http://10.10.10.5:9090/Administration/Web/UI/UXStudio/Views/AspMarkup/Wizards/DataSource/DataSourceOrderByWizard.aspx?workflowId=90a

Order By Parameters Wizard

Specify the columns you would like to order by.

Sort By

Name Ascending Descending

Then by

Date Ascending Descending

Then by

ID Ascending Descending

Order by Expression:

Name, Date, ID

[Advanced Mode](#)

OK Cancel

Procedure

1. Open the data source's smartpane, and select **Configure Order By Parameters**.
2. Select the parameters by which you want to sort the data source.
3. Click **OK**.
4. (Optional) Click **Advanced Mode** to create an Order By expression with multiple parameters. Separate parameters with a comma.
5. (Optional) Select **Automatically generate the OrderBy...** to automatically generate the Order By expression in the markup during runtime, based on the parameters you added.

For more information about Order By parameters, see <http://msdn.microsoft.com/en-us/library/system.web.ui.webcontrols.linqdatasourceselecteventargs.orderbyparameters.aspx>.

Order By Parameters Wizard

Automatically generate the Order By expression based on the provided parameters
