

## Add a Loading Panel on Button Click

Last Modified on 05/22/2017 12:34 pm EDT

This sample code shows how to add a loading panel on button click. It is also useful when you want to block submit after one click.

```
<%@ Control %>

<table cellpadding="0" cellspacing="0" class="sqf-main-table" id="mainTable">

  class="sqf-header">

  style="height: 200px;">
  <%= { DateTime.Now.ToString() } %>

class="sqf-footer-table" cellpadding="0" cellspacing="0"> class="sqf-footer-button-cell"> runat="server" Text="Submit"
CommandArgument="0" OnClientClicked="blockUIOnSubmit" /> table> <sq:AjaxLoadingPanel runat="server" ID="LoadingPanel" /> <script
type="text/javascript"> var ncontainer = "<%= { @ncontainer.ClientID } %>"; function blockUIOnSubmit(sender, args) { if (sender.validationResult
=== true) { var loadingPanel = $find(ncontainer + "_LoadingPanel"); loadingPanel.show("mainTable"); } }; script>
```
