

Create a Custom Column Display Name

Last Modified on 11/28/2017 5:41 am EST

v8.3 and later

When you create a Grid tile, you cannot use spaces in the column name. You can customize the column display name to include a space using JSON.

Grid Tile: Column Display Name

```
{
  "columns": [
    {
      "field": "AVGTime",
      "title": "Average Time",
      "width": 100
    },
    {
      "field": "ActivatedDate",
      "format": "{0:n1}/d",
      "title": " Activated Date ",
      "width": 100
    },
    {
      "field": "Name",
      "title": "Customer Name",
      "width": 100
    },
    {
      "field": "PreviousYearEarning",
      "title": " Previous Year Earning ",
      "width": 100
    }
  ]
}
```
