

Attach a Large File to a Form

Last Modified on 01/16/2018 7:25 am EST

Description

When you attach a large file to a form, the form fails to submit.

Cause

There is a data limit for each form.

Affected Versions

All versions.

Solution

1. Access the `web.config` file.
2. Edit the following node, which determines the maximum request size (in Kb), according to your organization's requirements.

Note: If there is limited bandwidth between the client and the Cora SeQuence server, uploading a large attachment might still fail.
