Example Request

```

var request = {"request":
{"PageSize":20,
"PageNum":1,
"ContextMenuId":"default",
"IgnoreUserTime":false,
"SortDirection":0,
"SortField":"WorkflowTemplateName",
"CategoryId":"00000000-0000-0000-0000-000000000000"}}

$.ajax({
type: 'POST',
url: "/_vti_bin/Flowtime/ProcessesService.svc/GetData",
contentType: "application/json; charset=utf-8",
dataType: "json",
data: JSON.stringify(request),
headers: {
"uiculture": "en-GB",
"culture": "en-GB",
"X-SqXsrfToken": xsrf
},
success: function (data) {
alert(data);
},
error: function (error) {
console.log(error);
}
});

```

Response Parameters

Name	Type	Description
CurrentRows	integer	Number of items returned.
Items	array	List of items returned. Each item contains properties as defined in the config file, for example <i>{WorkflowInstance:1,[etc.]}</i> .
TotalRows	integer	Number of total items in the system.
