

Exception 'ExEntityDataModelCannotBeAccessed' when calling OData Service

Last Modified on 01/16/2018 7:25 am EST

Description

When you call a Cora SeQuence OData Service, the exception *ExEntityDataModelCannotBeAccessed* displays in Event Viewer and Fiddler. HTTP Error code 500.

Cause

OData Service for the requested data model is disabled. By default, the OData feature is disabled.

Affected Versions

7.7 and later.

Solution

Use the data model wizard to explicitly enable the OData Service endpoint.

1. From a Form activity, open the data model wizard.
2. Click **Data Model > Advanced Options**.
3. From the **OData Services** tab, select **Enable OData Services** for this data model.
4. Enable **OData Service**.
5. Click **OK**.
