

Create Folder Activity Overview

Last Modified on 12/03/2017 9:10 am EST

Context

The Create Folder Activity creates a folder in an external storage system. After you create the folder, you can save items from Cora SeQuence to the folder by executing other activities, such as the [Put File Activity](#).

Add a New Connection to an External Storage System

First, you [define a connection to an external storage system](#).

Create a Folder

- You can define the target path and folder name manually, or by using an expression.
- The target path and file name are appended to the external storage system's connection that you defined.

Example: `https://{FTPConnection}/{MortgageOriginationRegion}/Mortgage_Claims`

- You must use forward slashes (/) when you define the target path and folder name.
