

Get the Connection String Using the API

Last Modified on 11/28/2017 8:51 am EST

Add reference to `Pnmsoft.Sequence`, `Pnmsoft.Sequence.Data`, and `Pnmsoft.Sequence.Security`.

```
using System.Data;
using PNMsoft.Sequence.Configuration;
using PNMsoft.Sequence.Utility;
using System.Data.Common;

DatabaseConfigurationElement database = ConfigUtil.GetDatabase();
DataProvider provider = DataProviderFactory.Create(database.Provider, database.ConnectionString);
using (IDataReader reader = DataProviderExtensions.ExecuteReader(provider, "Some SP", new DbParameter[] { DataProviderExtensions.CreateInParameter(provider, "param1", DbType.String, "param1 value")
}))
    {
        //Do something
    }
}
```
