

Disable the Submit Button After Click Event

Last Modified on 12/03/2017 6:46 am EST

You can disable the Submit button and Save button on page unload. This is helpful when you want to prevent double-click, which triggers a *Failed to save data* error message, and creating duplicate records in a UACT table.

Add the following script to the form's markup.

btnSubmit is the ID of the Submit button.
