

Hide or Format Control Labels in a Grid

Last Modified on 08/06/2017 2:34 am EDT

By default, controls in a grid edit template have labels prepended.

If you only have one column in your grid, you might want to hide the control label completely.

1. Select the grid, click >, then click **Edit Columns**.
2. Highlight the column in Selected Columns window, and locate the property ***EditFormHeaderText*** in the properties window.
By default, the value is {0}, which is a placeholder for the header text, and the colon is literal.
3. To hide the label, remove all text from this property.
