

# Get File Activity Overview

Last Modified on 11/10/2021 1:37 pm EST

## Context

The Get File Activity imports a single file from an external storage system into Cora SeQuence.

## Add a New Connection to an External Storage System

First, you [define a connection to an external storage system](#).

## Supported Storage Systems

- Azure Blob Storage
- Azure File Storage
- FTP
- SFTP
- Network Drive

## Define the File Import

### Get File Activity Parameters

Parameter	Description
<b>Connection to File Storage</b>	Connection you defined to the external storage system.
<b>Source Path</b>	Path to the folder where you want to import the file from. It is appended to the connection you defined to the external storage system. You must use backward slashes (\) when you define the file name. Example: <i>Host\BasePath\SourcePath\FileName</i>
<b>File Name</b>	The file that you want to import from an external storage system into Cora SeQuence. There are a couple of ways to define the file name.
<b>If the file does not exist</b>	If the file does not exist, select how the activity proceeds. <ul style="list-style-type: none"><li>• <b>Fail activity execution:</b> the activity fails.</li><li>• <b>Continue activity execution:</b> the activity continues, without importing a file.</li></ul>

## Get File Activity Details

Transfer a file storage (e.g. FTP) to Sequence

### Connection to File Storage

FTP

### Source Path

/Completed\_Applications

### File Name \*

Name of the file you want to download (e.g. file.xls)

Mortgage\_Application.pdf

### If the file does not exist

- Fail activity execution
- Continue activity execution

Back

Finish

Cancel
