

## Validate a Workflow

Last Modified on 05/15/2020 5:29 am EDT

Use this API sample to validate a workflow.

```
IWorkflowEngine engine = WorkflowRuntime.Engine;
Workflow workflow = engine.GetService().GetWorkflow(workflowId);

ValidationContext validationContext = new ValidationContext(engine);
validationContext.Options.IsRecursive = true;

Validator validator = Validator.GetValidator(workflow, engine);
validator.Validate(validationContext);

foreach(ValidationError error in validationContext.Errors)
{
    //do whatever you want with an error...
}
```
