

Flowtime Service Does Not Work and No Data Displays

Last Modified on 01/25/2018 11:09 am EST

Description

When you access the Flowtime site no data displays.

Cause

There are several items to check and verify.

Affected Versions

All versions

Solutions

Check the following items.

- WCF HTTP Activation is enabled in the server features.
Start > Control Panel > Turn Windows features on or off > .NET Framework 4.5 Features > WCF Services > HTTP Activation > Install.
- Make sure you have only a single binding to the site.
IIS > Flowtime Site > Advanced Binding
- If you converted the site to HTTPS, make sure the binding is also HTTPS.
