

# Add Custom CSS and JavaScript to Cora SeSequence

Last Modified on 07/01/2018 9:31 am EDT

## Overview

You can add custom CSS and JavaScript to the Flowtime site and Cora SeSequence Forms that are applied system wide.

**IMPORTANT:** The CSS and JS files are executed alphabetically. It's important to name the files in a way that will execute in the order you need.

## Create CSS and JS Files

To apply customizations to the Flowtime portal and Forms, you need to add the relevant file to the Shared Resources.

Component	File Extension	File Location
Portal	.css	SharedResources\Externals\Portal\Css
Portal	.js	SharedResources\Externals\Portal\Js
Forms	.css	SharedResources\Externals\Forms\Css
Forms	.js	SharedResources\Externals\Forms\Js
