

Force Cora SeQuence to Communicate Through TLS 1.2

Last Modified on 03/08/2018 10:41 am EST

Overview

When TLS 1.1 is blocked, you can force Cora SeQuence to communicate through TLS 1.2.

Procedure

1. Add the following key under the section.
2. Add `targetFramework="4.6.2"` to the `httpRuntime` key under the `pages` section.

Old: `< httpRuntime requestValidationMode="2.0" maxRequestLength="4096" executionTimeout="1200" enableVersionHeader="false" />`

New: `< httpRuntime requestValidationMode="2.0" maxRequestLength="4096" executionTimeout="1200" enableVersionHeader="false" targetFramework="4.6.2"/>`
