

# Create an Email Template

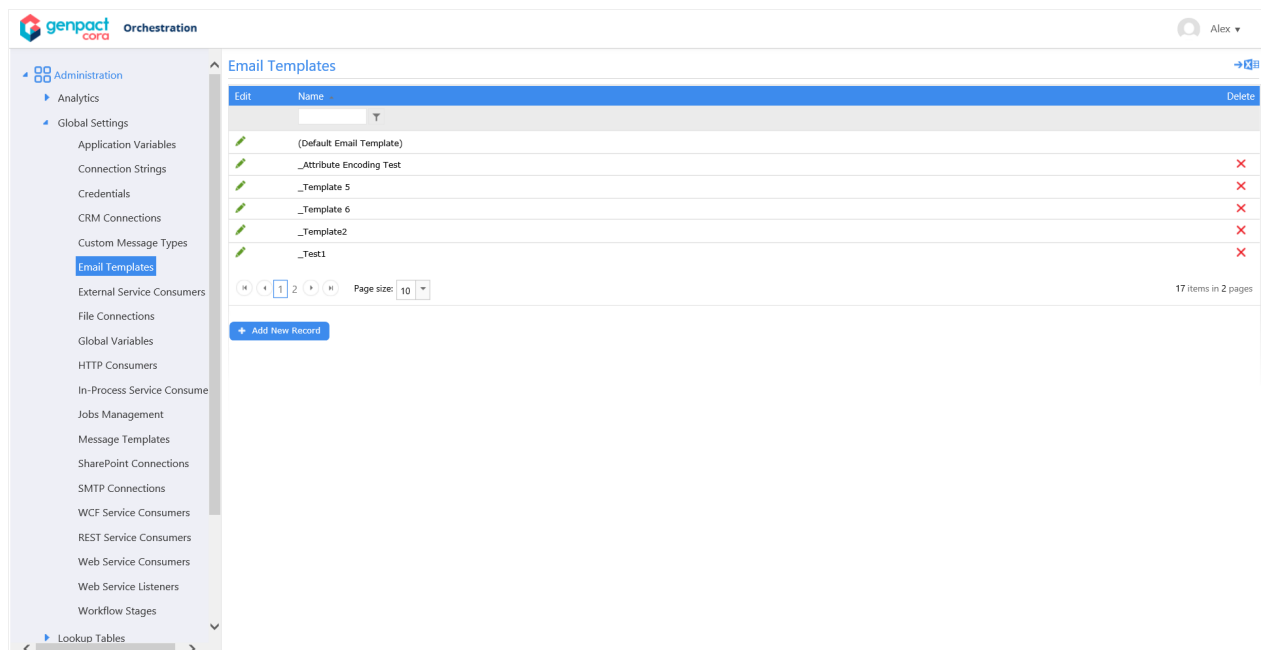

Last Modified on 03/26/2018 7:40 am EDT

## Overview

The email template is an HTML-based message that enables you to create reusable, dynamic messages. The template can include free text as well as message parameters. You select an email template and define the parameter values in the Email Activity wizard.

## Email Template Table

You manage all email templates from the email template table. Navigate to **Administration > Global Settings > Email Templates**.

The screenshot shows the 'Email Templates' table in the GenPact Cora Orchestration interface. The table has columns for 'Edit', 'Name', and 'Delete'. The rows include:

Edit	Name	Delete
	(Default Email Template)	
	_Attribute Encoding Test	
	_Template 5	
	_Template 6	
	_Template2	
	_Test1	

Below the table, there is a pagination control showing 'Page size: 10' and '17 items in 2 pages'. An 'Add New Record' button is also visible.

## Default Email Template

There is an out-of-the-box default email template that you can use, or you can copy the default template to use as the base for a new email template.

### Update Table: Email Templates

Name

Template 

(parameters)

## Email Template Parameters

Message parameters are enclosed in double curly brackets, which are also highlighted in yellow. You select parameters from the right panel.

Parameter	Description
@bcc	Users you add to the BCC field on the Recipients tab of the Email Activity wizard.
@body	The content you define in the Body section on the Message tab of the Email Activity wizard.
@cc	Users you add to the CC field on the Recipients tab of the Email Activity wizard.
@from	User that you define in the From field on the Properties tab of the Email Activity wizard.
@subject	The content you define in the Subject section on the Message tab of the Email Activity wizard.
@to	Users you add to the To field on the Recipients tab Email Activity wizard.

## Use an Email Template in the Email Activity

To use an email template in the Email Activity, you need to select an HTML message format, either **Html** or **Html (Markup only)**.

### Message Tab

Where you define the Subject, Body, Email Template, and email message format.

### Recipients Tab

The users you define in the To, CC, and BCC fields are plugged in to the corresponding message parameters in the email template.

Email Activity ?

Message Recipients Attachments Properties

At least one recipient is required

**To**  
Email Expression 1:  
 

**Cc**  
Email Expression 1:  
 

**Bcc**  
 

Back Next Finish Cancel

### Important Notes

- When you use an expression that contains HTML content (such as form data, HTML forms, HTML controls, rich text editors) in the body section of the Email Activity, you need to wrap the expression inside `{{= }}` to render the expression in HTML format. For example, `{{= {Form1}.Query("Form1") ["Editor1"] }}`.
