Cora SeQuence 8.4.5 Release Notes

Last Modified on 05/07/2018 8:52 am EDT

11 APRIL 2018

This is an update for Cora SeQuence v8.4.0, which resolves a product issue, detailed below.

Resolved Issues

***AlternateMail* is not synched to the *fldEmail* field when provisioning users from Azure AD.**

Resolution: If there is no email property for the user, the Azure AD Synchronization Service retrieves the first item in the *AlternateEmails* property. If there is no value in the *AlternateEmails* field, the *MailNickName* property is retrieved.

Update Steps

Update from 8.4.4:

1. Download the files
2. Back up your Cora SeQuence database.
3. Run the `PatchSynchronization_Data.sql` script from the DB Scripts folder on your Cora SeQuence database.
4. Run IISReset.
5. Make sure the following files and folders are on the same level in the server.
   - `GAC`
   - `exe.bat`
   - `PatchTo8_4_5.ps1`
6. Run the `exe.bat` file as Administrator on all Cora SeQuence servers.
7. Run IISReset for the change to take effect.

NOTE: If you are running a Cora SeQuence version earlier than v8.4.4, you must install v8.4.4 before you install v8.4.5.
