Cora SeQuence 8.5.9 Release Notes

10 July 2018

This is an update for Cora SeQuence v8.5, which includes a fix for the issue detailed below.

Resolved Issue

Lack of API backward compatibility with v7.10.5: When upgrading to v8.5.8, the**TaskViewModel** object **TaskInstance** property was null.

Resolution: Object Ref was fixed to allow access to TaskInstance values.

Update Steps

1. Back up the Cora SeQuence database.
2. Download the ZIP file.
3. Open the **DB Scripts** folder, and run the `PatchSynchronization_Data.sql` script on your Cora SeQuencedatabase.
4. Run IISReset.
5. Make sure that the following files and folders are in the same level on the server.
   - Engine
   - SequencePatch.xml
   - SequencePatcher.ps1
6. Run `SequencePatcher.ps1` file as Administrator on all Cora SeQuence servers:
   a. Right click `SequencePatcher.ps1`, and then select **Run with PowerShell**.
7. Run IISReset for the change to take effect.

Rollback Steps (in case of failure)

1. Restore the Cora SeQuence database to previous state.
2. Return the old dlls.

> **NOTE**: If you are running a Cora SeQuence version earlier than v8.5.7, you need to install v8.5.7 before you install v8.5.8.
