

Cora SeSequence 8.6.0.1 Release Notes

Last Modified on 02/05/2019 7:51 am EST

31 July 2018

This is an update for Cora SeSequence v8.6, which includes a fix for the issue detailed below.

Resolved Issue

When setting up Dashboard Filters, if you added more than one combo box filter, each connected to a different data source, only the last filter displayed correct values. The other filters displayed an "undefined" value.

Update Steps

Updating from v8.6.

1. Back up your Cora SeSequence database.
2. Copy the JS files under **Shared Resources\Components\DataStreams\js** to a temporary location.
3. [Download](#) the ZIP file.
4. Open the **DB Scripts** folder, and run the `PatchSynchronization_Data.sql` script on your Cora SeSequence database.
5. Run IISRESET.
6. Make sure the following files and folders are in the same level on the server.
 - o Engine
 - o SequencePatch.xml
 - o SequencePatcher.ps1
7. Run `SequencePatcher.ps1` file as Administrator on the Cora SeSequence Flowtime and Administration servers.
 - a. Right click `SequencePatcher.ps1` , and then select **Run with PowerShell**.
8. Run IISRESET for the change to take effect.

Rollback Steps (in case of failure)

1. Restore the Cora SeSequence database to previous state.
2. Return the JS files.

NOTE: If you are running a Cora SeSequence version earlier than v8.6, you need to install v8.6 before you install v8.6.0.1.
