

## Add Status Bar and Status Label

Last Modified on 05/30/2019 6:02 am EDT

In Cora OpsManager, you may configure when and which statuses will appear on the status bar. Go to **Administration > Lookup Tables > ICM Data Model > Statuses**.

With **Display order** field, you can configure the order in which the statuses appear on the bar, and with **Always visible** check box you can set whether the status should be visible always or not.

If a status is set to not visible always, it will be displayed on the status bar only when it is the current status for a case.
