

PowerShell Function: Register-CoraSeQuenceJES

Last Modified on 12/08/2020 3:18 am EST

V9.0

Method

CoraSeQuence.Services

Description

Registers a Job Execution Service (JES) instance. This function creates a URL reservation, makes sure that the management service port is open on the Windows Firewall, and that the management service URL is returned.

Syntax

```
Register-CoraSeQuenceJES [[-ServiceID] ] []
```

Parameters

-ServiceID

Sets the numeric ID of the service instance (when there are multiple instances of the same service).

The port number of the management service is determined by this number.

This is the format: 5431[ServiceID]

Required?	false
Position?	1
Default value	1
Accept pipeline input?	false
Accept wildcard characters?	false

This function supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable.

For more information, see [about_CommonParameters](#).

Example

```
PS C:\>Register-CoraSeQuenceJES -ServiceID 2
```
