

Installing Cora SeQuence V9.x Pre-Built Applications

Last Modified on 05/05/2020 4:50 am EDT

V9.2

Overview

You can install pre-built applications or build customized applications. If your system does not require any customization or special code, deploy pre-built applications.

Before you begin

Before you build applications, make sure that:

- ✔ The target server is set up as required.
For more details, see [this article](#).
- ✔ The database is set up.
For more details, see [this article](#).
- ✔ The latest [PowerShell modules](#) are installed.
For more details, see [this article](#).
- ✔ The latest Cora SeQuence Standard package is [downloaded](#).

Install pre-built applications

1. To deploy a pre-built application, run the [Install-CoraSeQuenceApplication](#) function.
 - a. Do **one** of the following:
 - Set the `SourcePath` parameter to the pre-built application URL, and use your credentials to the repository as the `Credentials` parameter.
 - Download the pre-built application from the repository, and set the `SourcePath` to the download location.

Next steps

Deploy the pre-built application.

For more details, see [this article](#).

V9.0-V9.1

Overview

When you install Cora SeQuence V9.0, you can install pre-built applications or build customized applications.

If your system does not require any customization or special code, you can simply deploy pre-built applications.

Download files

When you install pre-built applications, you need to download the following files.

| SDK Tools | Pre-built application packages |
|---|--|
| <p>Installer wizard that installs the following items:</p> <ul style="list-style-type: none">• PowerShell Modules packages—<i>only this item is relevant for this procedure.</i>• Cora SeQuence NuGet packages—not required for pre-built applications.• VSIX (Visual Studio extension that installs Cora SeQuence project templates)—not required for pre-built applications. <p style="text-align: right;">Download</p> | <ul style="list-style-type: none">• Cora SeQuence Standard Apps• Cora SeQuence Premium Apps—includes HotOperations <p style="text-align: right;">Download</p> |

Before you begin

Before you build applications, make sure that:

- The target server is set up as required.
For more details, see [this article](#).
- The database is set up.
For more details, see [this article](#).

Install pre-built applications

1. [Download](#) the SDK Tools to your computer or to a central repository.
2. Run the SDK Tools installer and install the PowerShell modules packages.
3. [Download](#) the relevant pre-built application package to the target server.

Next steps

In the Cora SeQuence V9.0 installation process, the next step is to deploy the application.

For more details, see [this article](#).
