PowerShell Function: Set-CoraSeQuenceQuickSearchConfiguration

Last Modified on 01/12/2021 12:32 pm EST

V9.6

Module

CoraSeQuence

Description

Configures the Cora SeQuence Hot Operations case search capability.

Syntax

To enable the search feature:

```
Set-CoraSeQuenceQuickSearchConfiguration [-Enable] [-PageSize ] [-SiteID ] []
```

To disable the search feature:

```
Set-CoraSeQuenceQuickSearchConfiguration [-Disable] [-SiteID ] []
```

Parameters

-Enable []

Enables the case search capability.

Required?	false
Position?	named
Default value	False
Accept pipeline input?	false
Accept wildcard characters?	false

-PageSize

Defines the number of results to display for search queries.
This parameter can be used with the `Enable` parameter or on its own.

Required?	false
Position?	named

Default value	0
Accept pipeline input?	false
Accept wildcard characters?	false

-Disable []

Disables the case search capability.

Required?	false
Position?	named
Default value	False
Accept pipeline input?	false
Accept wildcard characters?	false

-SiteID

Sets the numeric ID of the site instance (for multiple instances of the same site).

Required?	false
Position?	named
Default value	1
Accept pipeline input?	false
Accept wildcard characters?	false

This function supports these common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable.

For more information, see about_CommonParameters.

Examples

To enable search, use only the `Enable` parameter. If you want to limit the number of retrieved results, add the `PageSize` parameter.

```
PS C:\>Set-CoraSeQuenceQuickSearchConfiguration -Enable -PageSize 100
```

To disable search, use only the `Disable` parameter.

```
 PS C:\>Set-CoraSeQuenceQuickSearchConfiguration -Disable
```
