

# Cora SeSequence 9.2.1 Release Notes

Last Modified on 03/12/2021 7:05 pm EST

17 FEBRUARY 2020

This update includes a new feature and product enhancements.

## New features and enhancements

- Analytics dashboards: To improve system performance, you can now set up caching for dashboard's data.  
For more information on analytics dashboards, see [this article](#).
- SAP: The SAP activity is now available with the Premium package.
- Administration application performance: First-time loading of Administration pages, components, and activities have been improved.

### Heads up!

Support for WS-Federation authentication method ends by December 2020.

## Deployment

There are six pre-build application deployment packages available, depending on the type of application that you are deploying. You install each Cora SeSequence application separately.

Site applications	Service applications
<ul style="list-style-type: none"><li>• Administration</li><li>• Flowtime</li><li>• WebAPI</li></ul>	<ul style="list-style-type: none"><li>• Job Execution Service (JES)</li><li>• Background Runtime Service (BRS)</li><li>• Active Directory Synchronization Service (ADSS)</li></ul>

When you deploy pre-built applications, you can choose between the *Standard* and *Premium* packages. The *Premium* package includes HotOperations. You can also build and deploy your own Cora SeSequence applications.

Click [here](#) to see how to deploy Cora SeSequence in an environment with pre-built applications.

For more details on installing and deploying Cora SeSequence, see [this article](#).

## Deploying SAP

If your implementation requires integration with SAP, you need to run additional scripts after you deploy the Cora SeSequence database and applications.

For more details, see [this article](#).

### NOTE

You need credentials to access the Cora SeSequence repositories. Contact [Support](#) to obtain credentials.

### **IMPORTANT**

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).
