

Cora SeSequence 9.2.2 Release Notes

Last Modified on 03/12/2021 7:05 pm EST

1 MARCH 2020

This update includes a new feature.

Feature

- Apache Kafka messaging queue mechanism is now generally available. For more details, see [this article](#).

Deployment

There are six pre-build application deployment packages available, depending on the type of application that you are deploying. You install each Cora SeSequence application separately.

Site applications	Service applications
<ul style="list-style-type: none">• Administration• Flowtime• WebAPI	<ul style="list-style-type: none">• Job Execution Service (JES)• Background Runtime Service (BRS)• Active Directory Synchronization Service (ADSS)

When you deploy pre-built applications, you can choose between the *Standard* and *Premium* packages. The *Premium* package includes HotOperations. You can also build and deploy your own Cora SeSequence applications.

Click [here](#) to see how to deploy Cora SeSequence in an environment with pre-built applications.

For more details on installing and deploying Cora SeSequence, see [this article](#).

NOTE

You need credentials to access the Cora SeSequence repositories. Contact [Support](#) to obtain credentials.

IMPORTANT

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).
