

# Cora SeSequence 9.4.3 Release Notes

Last Modified on 03/12/2021 7:05 pm EST

23 SEPTEMBER 2020

This update includes enhancements to the Email Composer component and the security configuration.

## Enhancements

- Email Composer now:
  - Supports search and auto complete of name and email address in To, Cc, and Bcc fields.
  - Displays original message with all details like from, timestamp, to, cc, subject, and message body in Reply, Reply All, and Forward messages.
- Security configuration: Cora SeSequence now provides an enhanced security of session cookies while using HTTPS.  
To enable this enhanced security configuration, a new PowerShell function [Set-CoraSeSequenceSiteSecurityConfiguration](#) is introduced in place of the existing [Set-CoraSeSequenceSiteWCFCConfiguration](#) function to configure site for HTTP/HTTPS.

## Deployment

There are six pre-build application deployment packages available, depending on the type of application that you are deploying. You install each Cora SeSequence application separately.

Site applications	Service applications
<ul style="list-style-type: none"><li>• Administration</li><li>• Flowtime</li><li>• WebAPI</li></ul>	<ul style="list-style-type: none"><li>• Job Execution Service (JES)</li><li>• Background Runtime Service (BRS)</li><li>• Active Directory Synchronization Service (ADSS)</li></ul>

When you deploy pre-built applications, you can choose between the *Standard* and *Premium* packages. The *Premium* package includes HotOperations. You can also build and deploy your own Cora SeSequence applications.

Click [here](#) to see how to deploy Cora SeSequence in an environment with pre-built applications.

For more details on installing and deploying Cora SeSequence, see [this article](#).

With Cora SeSequence applications, also upgrade the database to this version. For more information on *database upgrade* paths, see [this article](#).

### NOTE

Contact [Support](#) to obtain credentials to access the Cora SeSequence repositories.

### IMPORTANT

Before upgrade, make sure to update the PowerShell modules to the latest version 1.0.1.188. Click [here](#) to view a sample PowerShell script. Consider this sample for reference only, and do not copy paste from here.

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).
