

Job Execution Service (JES) Overview

Last Modified on 07/04/2023 5:49 am EDT

Starting with V10.0, Cora SeSequence has been renamed to Cora Orchestration.

The Job Execution Service (JES) is an integral part of the Cora SeSequence and Cora Orchestration functionality. JES is deployed as part of the installation and continues to run in the background at all times.

JES is a Windows service that is responsible for executing several jobs, each of which performs one of the following actions:

- Collect and archive data
- Retrieve archived data
- Synchronize the operational database with Elasticsearch database
- Send conversation emails
- Auto populate address book from conversation emails
- Migrate files
- Start a workflow
- Listen to emails
- Listen to a Kafka Subscriber
- Listen to Azure Service Bus queues
- Listen to Message Bus queues

Unlike the BRS threads that are configured via the BRS config file, all the above jobs are configured from the Cora SeSequence and Cora Orchestration Admin site.
