

# Cora SeQUENCE 9.6.3 Release Notes

Last Modified on 05/04/2021 5:30 am EDT

04 MAY 2021

This update includes some resolved issues.

## Resolved issues

Component	Issue	Ticket #
Database	Non-administrative users with Read and Write permissions to a lookup table couldn't see the table.	270207
	A non-global admin user with Read and Write permissions on a workflow with two lookup tables couldn't see the workflow in the Administration site.	402530
Email Listener	From the web interface, when you forwarded an email with the original email as a .eml attachment, the following error occurred: <i>Cannot insert the value NULL into column 'fldContentType', table 'dbo.tblAttachments' from email listener</i>	386175

## Deployment

Download the release package from the [Cora SeQUENCE](#) repository.

### NOTE

Contact [Support](#) to obtain credentials to access the Cora SeQUENCE repositories.

There are six pre-built application deployment packages available, depending on the type of application that you are deploying. You install each Cora SeQUENCE application separately.

Site applications	Service applications
<ul style="list-style-type: none"><li>• Administration</li><li>• Flowtime</li><li>• WebAPI</li></ul>	<ul style="list-style-type: none"><li>• Job Execution Service (JES)</li><li>• Background Runtime Service (BRS)</li><li>• Active Directory Synchronization Service (ADSS)</li></ul>

When you deploy pre-built applications, you can choose between the *Standard* and *Premium* packages. The *Premium* package includes HotOperations. You can also build and deploy your own Cora SeQUENCE applications.

Click [here](#) to see how to deploy Cora SeQUENCE in an environment with pre-built applications.

For more details on installing and deploying Cora SeQUENCE, see [this article](#).

## IMPORTANT

With Cora SeQuence applications, also upgrade the database to this version.  
For more information on *database upgrade* paths, see [this article](#).

Before upgrade, make sure to update the PowerShell modules to the latest version. For *PowerShell modules version mapping with Cora SeQuence version*, see [this article](#).

Click [here](#) to view a sample PowerShell script. Consider this sample for reference only, and do not copy paste from here.

For *development* purposes, you can run Cora SeQuence with Microsoft SQL Server Developer Edition.

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).
