

# Cora SeSequence 9.8.1 Release Notes

Last Modified on 10/20/2021 4:22 am EDT

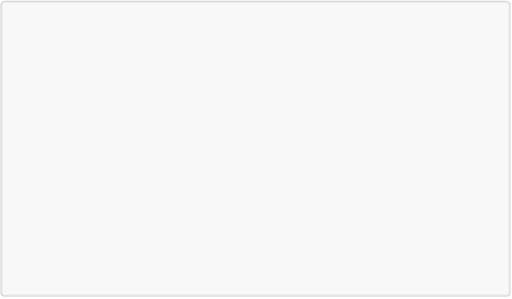

18 OCTOBER 2021

This update includes some resolved issues.

## Resolved issues

Component	Issue	Ticket #
Conversations View	When you created a task from the Conversations View, the autocomplete functionality for the "To" field didn't work for some tasks.	558275
OAuth	When a validation failed, the system displayed the OAuth credentials in the event viewer.	564178

## Known issue

Component	Issue	Workaround
ADSS	ADSS crashes after installation.	Comment out the following code lines in the config file: 

## Deployment

Download the release package from the [Cora SeSequence](#) repository.

### NOTE

Contact [Support](#) to obtain credentials to access the Cora SeSequence repositories.

There are seven pre-build application deployment packages available, depending on the type of application that you are deploying. You install each Cora SeSequence application separately.

Site applications	Service applications
<ul style="list-style-type: none"> <li>• Administration</li> <li>• Flowtime</li> <li>• Flowtime Lite</li> <li>• WebAPI</li> </ul>	<ul style="list-style-type: none"> <li>• Job Execution Service (JES)</li> <li>• Background Runtime Service (BRS)</li> <li>• Active Directory Synchronization Service (ADSS)</li> </ul>

When you deploy pre-built applications, you can choose between the *Standard* and *Premium* packages. The *Premium* package includes HotOperations. You can also build and deploy your own Cora SeQUENCE applications.

Click [here](#) to see how to deploy Cora SeQUENCE in an environment with pre-built applications.

For more details on installing and deploying Cora SeQUENCE, see [this article](#).

### IMPORTANT

With Cora SeQUENCE applications, also upgrade the database to this version. For more information on *database upgrade paths*, see [this article](#).

Before upgrade, make sure to update the PowerShell modules to the latest version. For *PowerShell modules version mapping with Cora SeQUENCE version*, see [this article](#).

Click [here](#) to view a sample PowerShell script. Consider this sample for reference only, and do not copy paste from here.

For *development* purposes, you can run Cora SeQUENCE with Microsoft SQL Server Developer Edition.

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).
