

Cora SeSequence 9.6.4 Release Notes

Last Modified on 03/16/2022 2:09 am EDT

13 DECEMBER 2021

This update includes some resolved issues and a known issue.

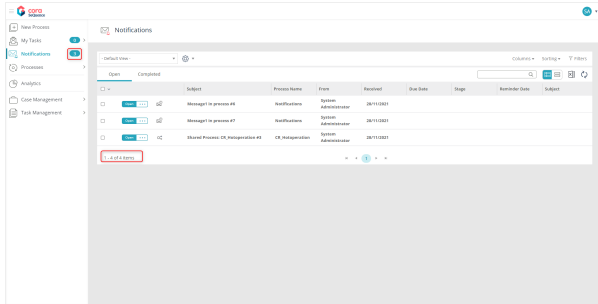

IMPORTANT

This update *doesn't* include fixes for v9.6.3.

Resolved issues

Component	Issue	Ticket #
Attachments	If the file name of a case attachment included special characters, an exception occurred when the user opened the attachment.	582571
HotOperations	The following error occurred when you exported the Team Leader task list to Excel: <code>Cannot read property 'toString' of undefined</code> .	581499

Known issue

Component	Issue	Workaround
Flowtime	When you add a user as a delegate, the counter next to the Notifications menu item doesn't update and the delegation notification isn't displayed in the list of notifications. 	You can view the updated count at the bottom of the grid.

Deployment

Download the release package from the [Cora SeSequence repository](#).

NOTE

Contact [Support](#) to obtain credentials to access the Cora SeSequence repositories.

NOTE

No dacpac upgrade is required for this release.

There are seven pre-build application deployment packages available, depending on the type of application that you are deploying. You install each Cora SeSequence application separately.

Site applications	Service applications
<ul style="list-style-type: none">• Administration• Flowtime• Flowtime Lite• WebAPI	<ul style="list-style-type: none">• Job Execution Service (JES)• Background Runtime Service (BRS)• Active Directory Synchronization Service (ADSS)

When you deploy pre-built applications, you can choose between the *Standard* and *Premium* packages. The *Premium* package includes HotOperations. You can also build and deploy your own Cora SeSequence applications.

Click [here](#) to see how to deploy Cora SeSequence in an environment with pre-built applications.

For more details on installing and deploying Cora SeSequence, see [this article](#).

IMPORTANT

With Cora SeSequence applications, also upgrade the database to this version.

For more information on *database upgrade* paths, see [this article](#).

Before upgrade, make sure to update the PowerShell modules to the latest version. For *PowerShell modules version mapping with Cora SeSequence version*, see [this article](#).

Click [here](#) to view a sample PowerShell script. Consider this sample for reference only, and do not copy paste from here.

For *development* purposes, you can run Cora SeSequence with Microsoft SQL Server Developer Edition.

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).
